

THE AXIOM EDGE[®]

CPC Global Headquarters project had 4,000 LF of winding Axiom trim with multiple straight to tight curved sections and shapes. ProjectWorks[®] worked with Architectural Sales of MN, Inc. to achieve the most efficient, cost effective method to install with the least amount of waste, in the shortest amount of time.

A TOTAL CEILING SOLUTION

FROM PLANNING TO INSTALLATION

Axiom[®] Trim with dynamic curving, factory precision cuts and miters and ProjectWorks[®] no-cost pre-construction service assist contractors with bidding, ordering, and installing straight and curved, cut-to-length perimeter trim without a hitch. Now you can ensure the desired project design, minimize seams, and optimize material.

PRE-CONSTRUCTION PLANNING

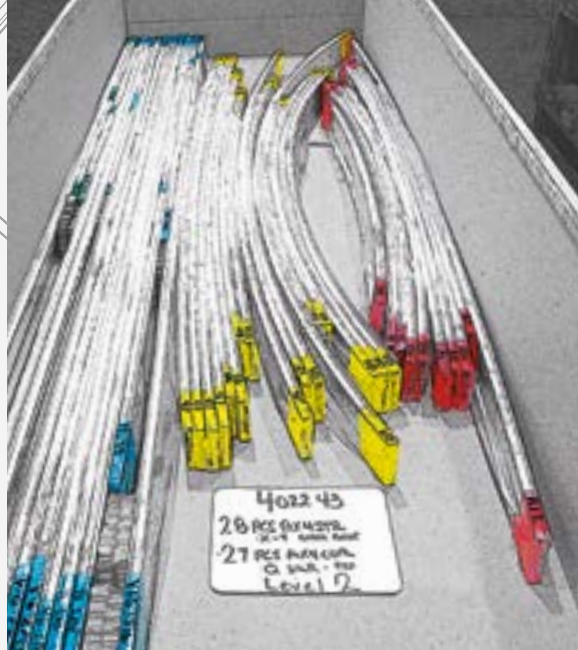

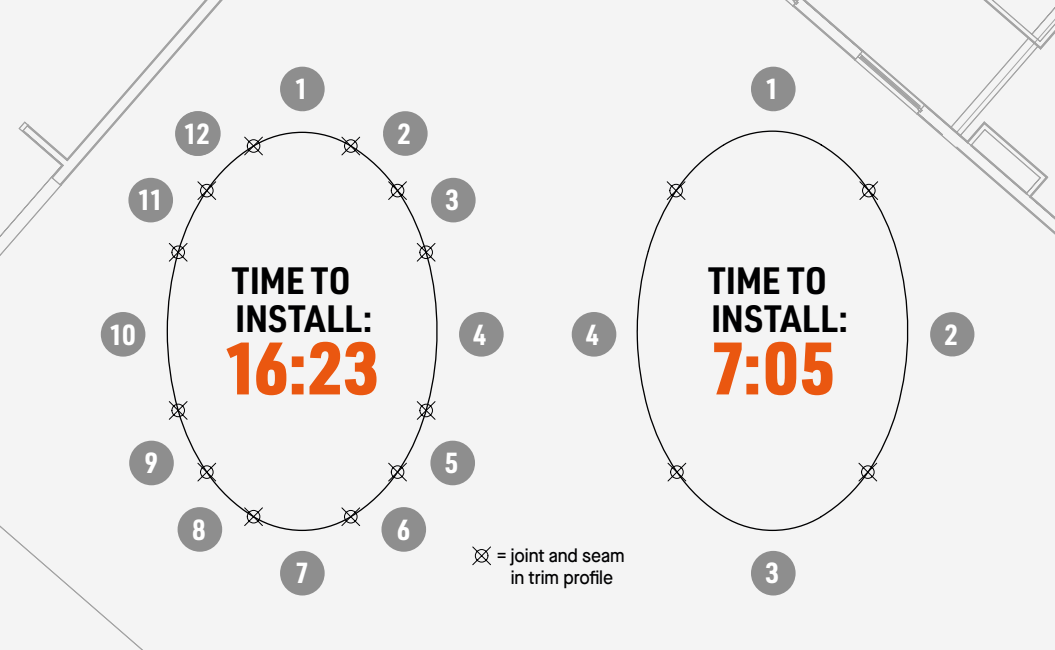

PROJECTWORKS complete drawing package includes a bill of materials with item numbers, quantities, tagged parts list, along with cut lengths and radii for estimates and takeoffs.

Axiom – with ProjectWorks precision-cutting and dynamic curving – optimizes stock material length and reduces splices for a better finished visual, faster installation, and labor savings.

Armstrong[®]
World Industries

Basic Curved Trim
Each change in radius requires a different piece

Dynamic Curving Trim
Multi-radii are on a single, full-length piece of trim

Axiom Parts
Optional color-coded packaging

MANUFACTURED DIFFERENCE

- **AXIOM® DYNAMIC CURVING DESIGN:** Single-direction custom curving allows Axiom to go from straight to curved and back to straight – fewer seams, less waste and eliminates challenging curved to straight joints
- **FACTORY PRECISION CUT AND MITERED:** No-fee, factory cut-to-length and mitered pieces eliminate on-site labor to cut and fit

HASSLE-FREE INSTALLATION

- **TAKEOFF DRAWING DETAILS:** Detailed RCP layout shows the exact location of each component throughout the project space
- **CRATING AND PACKAGING:** Product delivery of color-coded parts and packaging coordinate with the bill of materials to easily match the right parts with the project drawings

If you are in need of carton or bulk pack quantities of straight material to be laid out and field cut on-site, reach out to your local Armstrong distributor for pricing options (ProjectWorks Drawing Services not included with these options).
